

90MHz, 22V/ μ s 16-Bit Accurate Operational Amplifier

August 1998

FEATURES

- 90MHz Gain Bandwidth, $f = 100\text{kHz}$
- 22V/ μ s Slew Rate
- Settling Time: $< 1\mu\text{s}$ ($A_V = -1$, 150 μ V, 10V Step)
- Maximum Input Offset Voltage: 75 μ V
- Maximum Input Offset Voltage Drift: 2 μ V/ $^{\circ}\text{C}$
- Maximum (–) Input Bias Current: 10nA
- Minimum DC Gain: 1000V/mV
- Minimum Output Swing into 2k: $\pm 12.8\text{V}$
- Unity Gain Stable
- Input Noise Voltage: 5nV/ $\sqrt{\text{Hz}}$
- Input Noise Current: 0.6pA/ $\sqrt{\text{Hz}}$
- Low Distortion, –96dBc for 100kHz, 10V_{P-P}
- Specified at $\pm 5\text{V}$ and $\pm 15\text{V}$

APPLICATIONS

- 16-Bit DAC Current-to-Voltage Converter
- Precision Instrumentation
- ADC Buffer
- Low Distortion Active Filters
- High Accuracy Data Acquisition Systems
- Photodiode Amplifiers

DESCRIPTION

The LT[®]1468 is a precision high speed operational amplifier with 16-bit accuracy and less than 1 μ s settling to 150 μ V for 10V signals. This unique blend of precision and AC performance makes the LT1468 the optimum choice for high accuracy data acquisition applications and current-to-voltage conversion. The initial accuracy and drift characteristics of the input offset voltage and inverting input bias current are tailored for inverting applications.

The 90MHz gain bandwidth ensures high open-loop gain at frequency for reducing distortion. In noninverting applications such as an ADC buffer, the low distortion and DC accuracy allow full 16-bit AC and DC performance.

The 22V/ μ s slew rate of the LT1468 improves large signal performance in applications such as active filters and instrumentation amplifiers compared to other precision op amps.

The LT1468 is manufactured on Linear Technology's complementary bipolar process.

 LTC and LT are registered trademarks of Linear Technology Corporation.

TYPICAL APPLICATION

16-Bit DAC I-to-V Converter

1468 TA01

ABSOLUTE MAXIMUM RATINGS

Total Supply Voltage (V^+ to V^-)	36V
Maximum Input Current (Note 1)	10mA
Output Short Circuit Duration (Note 2)	Indefinite
Operating Temperature Range	-40°C to 85°C
Specified Temperature Range (Note 3)...	-40°C to 85°C
Junction Temperature	150°C
Storage Temperature Range	-65°C to 150°C
Lead Temperature (Soldering, 10 sec.)	300°C

PACKAGE/ORDER INFORMATION

	ORDER PART NUMBER
	LT1468CS8
	S8 PART MARKING
	1468

Consult factory for Industrial and Military Grade parts.

ELECTRICAL CHARACTERISTICS

$T_A = 25^{\circ}\text{C}$, $V_{CM} = 0\text{V}$ unless otherwise noted.

SYMBOL	PARAMETER	CONDITIONS	V_{SUPPLY}	MIN	TYP	MAX	UNITS

Note 1: The inputs are protected by back-to-back diodes and two 100Ω series resistors. If the differential input voltage exceeds 0.7V , the input current should be limited to 10mA . Input voltages outside the supplies will be clamped by ESD protection devices and input currents should also be limited to 10mA .

Note 2: A heat sink may be required to keep the junction temperature below absolute maximum when the output is shorted indefinitely.

Note 3: The LT1468 is designed, characterized and expected to meet these extended temperature limits, but is not tested at -40°C and at 85°C . Consult factory for guaranteed I grade parts.

Note 4: Slew rate is measured between $\pm 8\text{V}$ on the output with $\pm 12\text{V}$ input for $\pm 15\text{V}$ supplies and $\pm 2\text{V}$ on the output with $\pm 3\text{V}$ input for $\pm 5\text{V}$ supplies.

Note 5: Full power bandwidth is calculated from the slew rate measurement: $\text{FPBW} = \text{SR}/2\pi V_{\text{P}}$

Note 6: This parameter is not 100% tested.
