## MONOSTABLE MULTIVIBRATORS

### WITH SCHMITT-TRIGGER INPUTS

MAY 1983 — REVISED MARCH 1988

- Programmable Output Pulse Width  
With  $R_{int}$  . . . 35 ns Typ  
With  $R_{ext}/C_{ext}$  . . . 40 ns to 28 Seconds
- Internal Compensation for Virtual Temperature Independence
- Jitter-Free Operation up to 90% Duty Cycle
- Inhibit Capability

SN54121 . . . J OR W PACKAGE  
SN74121 . . . N PACKAGE  
(TOP VIEW)

NC - No internal connection.

logic symbol†

†This symbol is in accordance with ANSI/IEEE Std 91-1984 and IEC Publication 617-12.

FUNCTION TABLE

INPUTS			OUTPUTS	
A1	A2	B	Q	Q̄
L	X	H	L	H
X	L	H	L†	H†
X	X	L	L†	H†
H	H	X	L†	H†
H	↓	H	[Pulse]	[Pulse]
↓	H	H	[Pulse]	[Pulse]
↓	↓	H	[Pulse]	[Pulse]
L	X	↑	[Pulse]	[Pulse]
X	L	↑	[Pulse]	[Pulse]

For explanation of function table symbols, see page

† These lines of the function table assume that the indicated steady-state conditions at the A and B inputs have been setup long enough to complete any pulse started before the setup.

## description

These multivibrators feature dual negative-transition-triggered inputs and a single positive-transition-triggered input which can be used as an inhibit input. Complementary output pulses are provided.

Pulse triggering occurs at a particular voltage level and is not directly related to the transition time of the input pulse. Schmitt-trigger input circuitry (TTL hysteresis) for the B input allows jitter-free triggering from inputs with transition rates as slow as 1 volt/second, providing the circuit with an excellent noise immunity of typically 1.2 volts. A high immunity to  $V_{CC}$  noise of typically 1.5 volts is also provided by internal latching circuitry.

Once fired, the outputs are independent of further transitions of the inputs and are a function only of the timing components. Input pulses may be of any duration relative to the output pulse. Output pulse length may be varied from 40 nanoseconds to 28 seconds by choosing appropriate timing components. With no external timing components (i.e.,  $R_{int}$  connected to  $V_{CC}$ ,  $C_{ext}$  and  $R_{ext}/C_{ext}$  open), an output pulse of typically 30 or 35 nanoseconds is achieved which may be used as a d-c triggered reset signal. Output rise and fall times are TTL compatible and independent of pulse length.

Pulse width stability is achieved through internal compensation and is virtually independent of  $V_{CC}$  and temperature. In most applications, pulse stability will only be limited by the accuracy of external timing components.

Jitter-free operation is maintained over the full temperature and  $V_{CC}$  ranges for more than six decades of timing capacitance (10 pF to 10  $\mu$ F) and more than one decade of timing resistance (2 k $\Omega$  to 30 k $\Omega$  for the SN54121 and 2 k $\Omega$  to 40 k $\Omega$  for the SN74121). Throughout these ranges, pulse width is defined by the relationship  $t_{w(out)} = C_{ext}R_{Tln2} \approx 0.7 C_{ext}R_T$ . In circuits where pulse cutoff is not critical, timing capacitance up to 1000  $\mu$ F and timing resistance as low as 1.4 k $\Omega$  may be used. Also, the range of jitter-free output pulse widths is extended if  $V_{CC}$  is held to 5 volts and free-air temperature is 25°C. Duty cycles as high as 90% are achieved when using maximum recommended  $R_T$ . Higher duty cycles are available if a certain amount of pulse-width jitter is allowed.

PRODUCTION DATA documents contain information current as of publication date. Products conform to specifications per the terms of Texas Instruments standard warranty. Production processing does not necessarily include testing of all parameters.

logic diagram (positive logic)

Pin numbers shown on logic notation are for J or N packages.

- NOTES: 1. An external capacitor may be connected between  $C_{ext}$  (positive) and  $R_{ext}/C_{ext}$ .  
 2. To use the internal timing resistor, connect  $R_{int}$  to  $V_{CC}$ . For improved pulse width accuracy and repeatability, connect an external resistor between  $R_{ext}/C_{ext}$  and  $V_{CC}$  with  $R_{int}$  open-circuited.

## **absolute maximum ratings over operating free-air temperature range (unless otherwise noted)**

Supply voltage, $V_{CC}$ (see Note 3)	7 V
Input voltage	5.5 V
Operating free-air temperature range: SN54121	– 55 °C to 125 °C
SN74121	0 °C to 70 °C
Storage temperature range	– 65 °C to 150 °C

NOTE 3: Voltage values are with respect to network ground terminal.

## **recommended operating conditions**

			MIN	NOM	MAX	UNIT
$V_{CC}$	Supply voltage	54 Family	4.5	5	5.5	V
		74 Family	4.75	5	5.25	
$I_{OH}$	High-level output current				– 0.4	mA
$I_{OL}$	Low-level output current				16	mA
$dv/dt$	Rate of rise or fall of input pulse	Schmitt input, B	1			V/s
		Logic inputs, A1, A2	1			V/ $\mu$ s
$t_{w(in)}$	Input pulse width		50			ns
$R_{ext}$	External timing capacitance	54 Family	1.4		30	k $\Omega$
		74 Family	1.4		40	
$C_{ext}$	External timing capacitance		0		1000	$\mu$ F
	Duty cycle	$R_T = 2 \text{ k}\Omega$			67	%
		$R_T = \text{MAX } R_{ext}$			90	
$T_A$	Operating free-air temperature	54 Family	– 55		125	°C
		74 Family	0		70

## IMPORTANT NOTICE

Texas Instruments (TI) reserves the right to make changes to its products or to discontinue any semiconductor product or service without notice, and advises its customers to obtain the latest version of relevant information to verify, before placing orders, that the information being relied on is current.

TI warrants performance of its semiconductor products and related software to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are utilized to the extent TI deems necessary to support this warranty. Specific testing of all parameters of each device is not necessarily performed, except those mandated by government requirements.

Certain applications using semiconductor products may involve potential risks of death, personal injury, or severe property or environmental damage ("Critical Applications").

TI SEMICONDUCTOR PRODUCTS ARE NOT DESIGNED, INTENDED, AUTHORIZED, OR WARRANTED TO BE SUITABLE FOR USE IN LIFE-SUPPORT APPLICATIONS, DEVICES OR SYSTEMS OR OTHER CRITICAL APPLICATIONS.

Inclusion of TI products in such applications is understood to be fully at the risk of the customer. Use of TI products in such applications requires the written approval of an appropriate TI officer. Questions concerning potential risk applications should be directed to TI through a local SC sales office.

In order to minimize risks associated with the customer's applications, adequate design and operating safeguards should be provided by the customer to minimize inherent or procedural hazards.

TI assumes no liability for applications assistance, customer product design, software performance, or infringement of patents or services described herein. Nor does TI warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right of TI covering or relating to any combination, machine, or process in which such semiconductor products or services might be or are used.
