description

These low-power Schottky LSI devices incorporate synchronous up/down counters, four-bit D-type registers, and quadruple two-line to one-line multiplexers with three state outputs in a single 20-pin package. The up/down counters are programmable from the data inputs and feature enable $\overline{P}$ and enable $\overline{T}$ and a ripple-carry output for easy expansion. The register/counter select input R/$\overline{C}$, selects the counter when low and the register when high for the three-state outputs, Q_A, Q_B, Q_C, and Q_D. These outputs are rated at 12 and 24 milliamperes (54LS/74LS) for good bus driving performance.

Both the counter CCK and register clock RCK are positive-edge triggered. The counter clear $\overline{CCLR}$ is active low and is asynchronous on the 'LS696 and 'LS697, synchronous on the 'LS699. Loading of the counter is accomplished when $\overline{LOAD}$ is taken low and a positive transition occurs on the counter clock CCK.

Expansion is easily accomplished by connecting $\overline{RCO}$ of the first stage to $\overline{ENT}$ of the second stage, etc. All $\overline{ENP}$ inputs can be tied common and used as a master enable or disable control.

‡ All typical values are at V_{CC} = 5 V, T_A = 25°C.

§ Only one output should be shorted at a time, and duration of the short-circuit should not exceed one second.

NOTES: 3. I_{CCH} is measured after two 4.5 V to 0 V to 4.5 V pulses have been applied to CCK and RCK while $\overline{G}$ is grounded and all other inputs are at 4.5 V.

4. I_{CCL} is measured after two 0 V to 4.5 V to 0 V pulses have been applied to CCK and RCK while all other inputs are grounded.

5. I_{CCZ} is measured after two 0 V to 4.5 V to 0 V pulses have been applied to CCK and RCK while $\overline{G}$ is at 4.5 V and all other inputs are grounded.
